
Change Control Notification - online subscription service

FOR PRODUCTS USED IN REGULATED ENVIRONMENTS - www.cytiva.com/rsf

Cytiva is committed to a Quality Management System that ensures established processes meet the challenges of change. Our web-based Change Control Notification (CCN) service ensures that you are notified about changes that could potentially impact your product or process.

The service covers the following products used in regulated environments: Bioprocess hardware, software, single-use disposables, chromatography resins, cell culture products, Cell & Gene Therapy products and Biacore products.

What the CCN service offers

- Email notifications when a new CCN is published
- Access to history of all previously published CCNs for a specific product
- Possibility to download files in pdf format

How to get started

- Register an account at www.cytiva.com/rsf
- Start subscriptions to the products you want to be notified about

Keep in mind

- It is recommended to register with a generic company email address to ensure uninterrupted communication, for example, register your department's email as opposed to an individual email (e.g. change.notifications@company.com instead of name@company.com).
- Make sure to start a new subscription when you purchase a new product, that you are not yet subscribing to
